**Aim:** To deploy a static website using AWS S3 service.

**Objective:** Deploy a Static Website on AWS – Host a website using Amazon S3 and configure public access.

**Materials Required:** Computer with internet connection and having a AWS account.

### **Procedure:**

#### **About AWS:**

AWS (Amazon Web Services) is a comprehensive and widely-used cloud computing platform developed by Amazon. It offers a range of services such as computing power, storage, databases, networking, machine learning, and more— all delivered over the internet (the cloud).

With AWS, users can:

- ▢ Host websites and applications
- ▢ Store and retrieve data using services like Amazon S3
- ▢ Run virtual servers with EC2
- ▢ Deploy containers with Docker and Kubernetes
- ▢ Scale resources on-demand, paying only for what they use

AWS provides a secure, reliable, and cost-effective solution for businesses and individuals to run their applications without managing physical servers.

#### **About AWS S3:**

AWS S3 (Simple Storage Service) is a cloud-based storage service provided by Amazon Web Services. It allows users to store and retrieve any amount of data at any time, from anywhere on the web.

Key features:

- ▢ Object storage system (stores data as files called "objects")
- ▢ Highly scalable and durable
- ▢ Used for backup, static website hosting, data archiving, etc.
- ▢ Bucket is the container where data (objects) are stored
- ▢ Offers access control, versioning, and lifecycle rules

S3 is commonly used for storing website files, application data, and media content due to its simplicity and reliability.

#### **Steps to Perform:**

1. Login on or Signup AWS Platform
2. Search for S3 service and select buckets
3. Create a new bucket
4. Upload files/folders for the website
5. Edit properties and Permissions
6. Select Static Hosting

Website link will be generated copy and paste in the browser

## Instance Configuration:

Launch an instance | EC2 | eu-north-1 | 12:07 | 21-Aug | 92% | 07% | Account ID: 3186-5145-7153 | onkarsathe

EC2 > Instances > Launch an instance

**Instance type** [Info](#) | [Get advice](#)

Instance type

t3.micro Free tier eligible

Family: t3 2 vCPU 1 GiB Memory Current generation: true  
On-Demand Ubuntu Pro base pricing: 0.0143 USD per Hour  
On-Demand RHEL base pricing: 0.0396 USD per Hour  
On-Demand SUSE base pricing: 0.0108 USD per Hour  
On-Demand Linux base pricing: 0.0108 USD per Hour  
On-Demand Windows base pricing: 0.02 USD per Hour

☐ All generations [Compare instance types](#)

Additional costs apply for AMIs with pre-installed software

**Key pair (login)** [Info](#)

You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.

Key pair name - required

fuck [Create new key pair](#)

Launch an instance | EC2 | eu-north-1 | 12:08

EC2 > Instances > Launch an instance

Helps you connect to your instance 0.0.0.0/0

☒ Allow HTTPS traffic from the Internet  
To set up an endpoint, for example when creating a web server

☒ Allow HTTP traffic from the Internet  
To set up an endpoint, for example when creating a web server

Rules with source of 0.0.0.0/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

**Configure storage** [Info](#) [Advanced](#)

1x 8 GiB gp3 Root volume, 3000 IOPS, Not encrypted

[Add new volume](#)

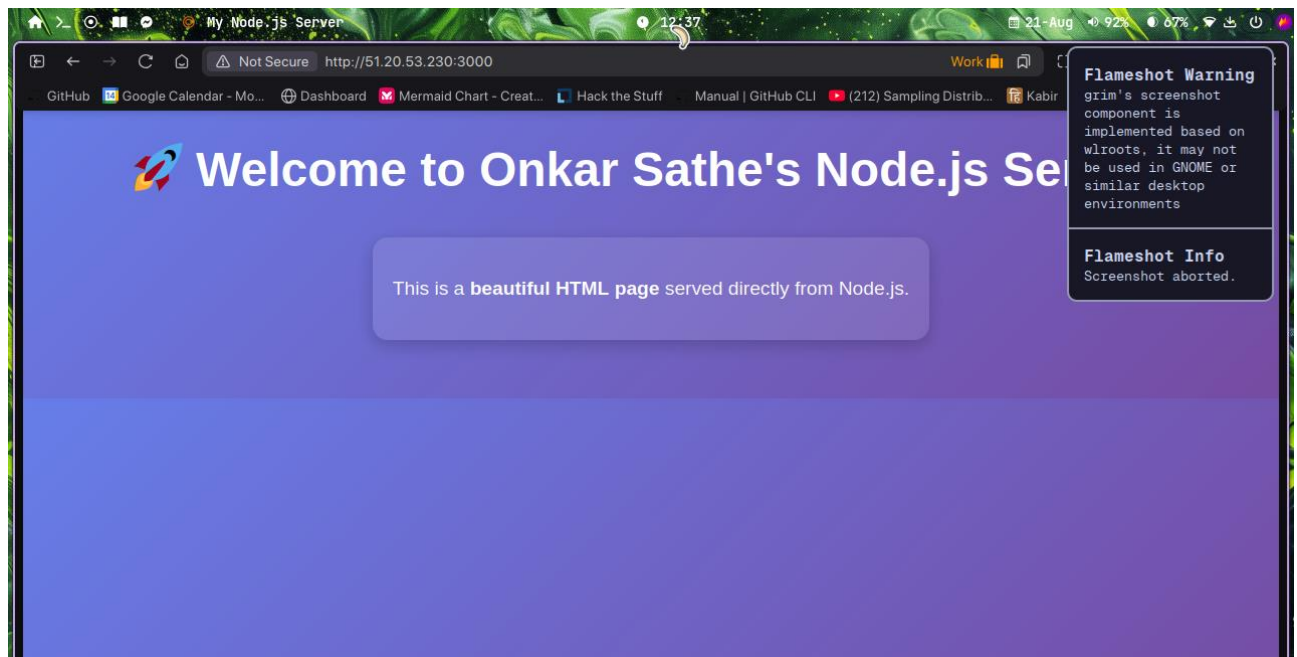

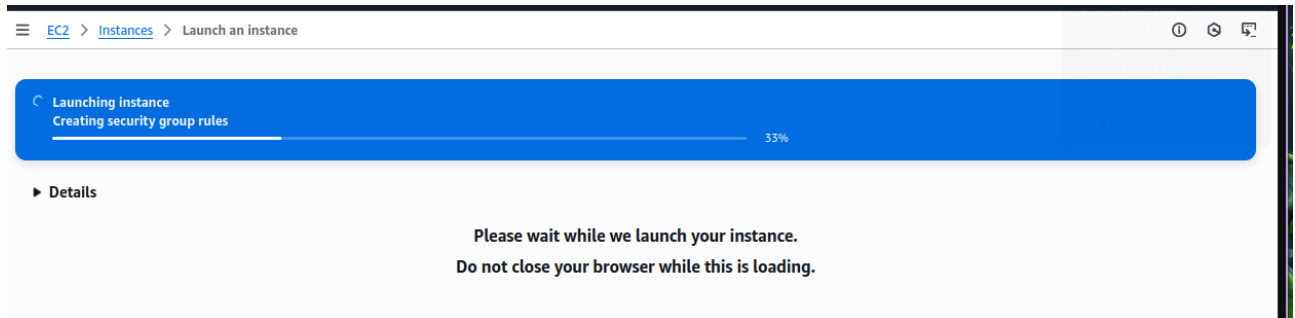

The selected AMI contains instance store volumes, however the instance does not allow any instance store volumes. None of the instance store volumes from the AMI will be accessible from the instance

[Click refresh to view backup information](#)  
The tags that you assign determine whether the instance will be backed up by any Data Lifecycle Manager policies.

0 x File systems [Edit](#)

## Conclusion:

Through this assignment, we learned how to host a static website using AWS S3. We understood how to create an S3 bucket, upload website files, enable public access, and access the website using a URL. This assignment helped us understand the basics of cloud storage and how AWS makes website deployment simple and efficient.
