Artificial Intelligence and Data Science**

Student Name : Sathe Onkar Abasaheb

Class: SY-B

Division: B

Roll No : 272078

Semester: IV

AcademicYear: 2024-25

Subject Name & Code: AD22232

Assignment No: 1

Title of Assignment: Formulate any three Customer Problem Statement (CPS) for any real world scenario using Miro tool.

Date of Performance: 22/01/2025

Date of Submission: 03/01/2025

Assignment 1.

Part 1

Aim: Formulate any tree Customer Problem Statement (CPS) for any real world Scenario.

Objective: Identify and define Customer problem Statement (CPS) that will serve as a basics for designing and developing Software Solution.

Material Required:

- Pen and paper.
- Computer Notes, Access to information related to customer domain

Theory:

Q.1} What is the Need of problem statement in Software engineering?

- Serves a crucial role in Software project Success. Other words, the problem statement is a format or tool for the stakeholders and developer's to communicate in concise, plain language about what tasks are being paid for and what must be accomplished conceptually for the project to be Success.

Q.2} What is the customer Problem Statement?
→ A customer problem Statement Outlines the problem that your customer face. It help's you to figure out the your

product or service will solve this problem for them.

3. Why a customer problem statement formulation important?

- A well articulated customer problem statement outlines problems that your customer's face.

Throughout the process, you will also be able to emphasize your customers.

4. How to generate customer problem stmt using Miro template?

- First of all visit to miro.com and create an untitled template then select the template for ~~the~~ CPS and enter the data.

- Conclusion

The customer problem statement (CPS) is a crucial step in a software engineering process as it forms foundation for developing the relevant & effective software solution.

User Interface.

- Functional requirement of interface are usually used in an engineering specification document.

UI must be :
 i) Formal
 ii) Corrective.
 iii) Standard.

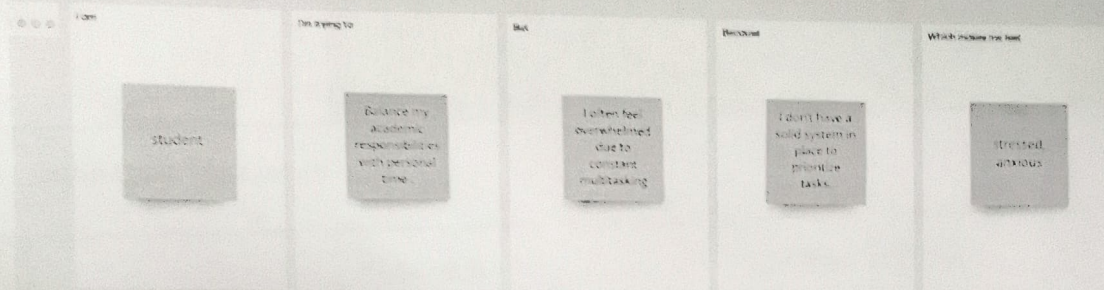

Conclusion.

- hence we successfully implemented the user stories.

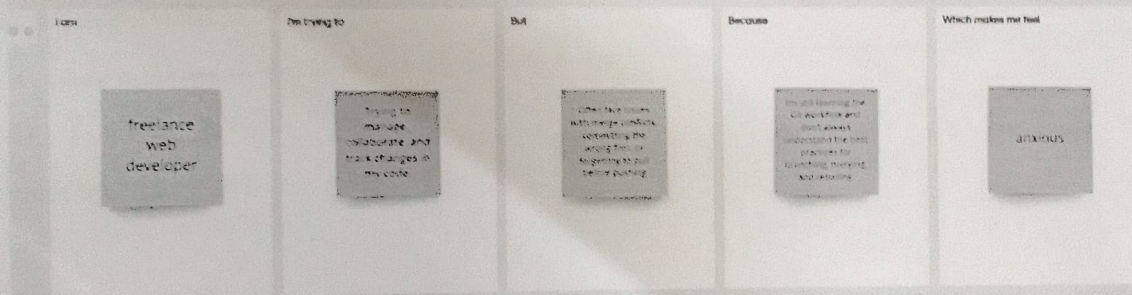

Software Requirements: Miro.

Results of Experiment:

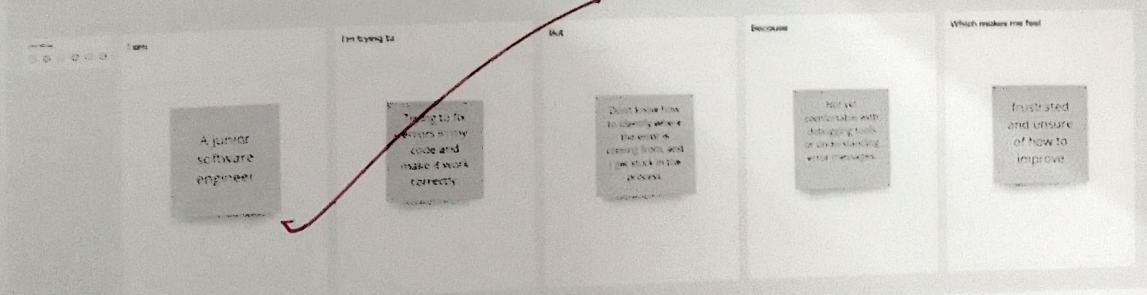

CPS I: Balance Student academic responsibilities with personal time.

CPS II: Freelancer Trying to manage, collaborate and track changes in code.

CPS III: Junior Software engineer Trying to fix errors in my code and make it work correctly.
